Customers are more satisfied, and businesses are able to keep their customers for the long haul thanks to **AntiCorrosion Company's** service portfolio, which boosts productivity, guarantees that products are up to code, and lessens the likelihood of material shortages, delays, and poor quality.

Based on the U & I concept, AntiCorrosion Company believes in working together. We work in tandem with our clients to offer expert advice, find solutions to issues, and finish projects on schedule.

To ensure that all parties involved in the supply chain can depend on the quality, completeness, and conformity of the products they trade, **AntiCorrosion Company** aims to offer inspection services within various industries. These industries include oil and gas, chemical and petrochemical, power, construction, offshore and pipelines, railroads, and pharmaceuticals.

Competent engineers, inspectors, and technicians are on staff at **AntiCorrosion company**. In accordance with the international code and standard, they are conducting inspections in accordance with client requirements.

Our Company

Premium Services

- **Vendor Inspection Department (VID)**
- **Vendor Expediting Department (VED)**
- **Project Inspection Department (PID)**
- **Vendor Survey and Audit (VSA)**
- **Professional and Expertise Supply (PES)**
- **NDT Support Services (NSS)**
- **Packing Inspection (PI)**

Vendor Inspection Department (VID):

The purpose of a vendor inspection, also called a third-party inspection, is to verify that the products are made in accordance with the client's specifications and any relevant codes, standards, and license requirements by visiting the vendor's facilities.

Timely, high-quality, and safe completion of all kinds of construction projects depends on thorough vendor inspections.

At the Manufacture, Vendor, or Sub-vendor's premises, our approved engineers conduct inspections at various points in the production and manufacturing process, according to the Client's requirements and the ITP and procedures that were approved during the Pre-inspection meeting.

CONTINUE

Mechanical Equipment's (Static and Rotating Machinery):

Pressure Vessels; Tanks; Heat Exchangers; Columns; Boilers; Structural Steel; Line Pipe; Fabricated Pipe; Bends; Valves; Flanges and Fittings; Skids; RTR Pipes and Fittings; Towers; Cranes; Castings and Forgings; Pumps; Gears; Generators; Seals; Rotors; Compressors; Fans; Turbines; Engines; Motors etc.

Coatings:

Offshore and onshore Line Pipes, Fabricated Pipes, Bends, Flanges and Fittings, Structural Steel, Offshore Platform, and Mechanical Equipment are coated with critical and non-critical coatings (FBE and liquid coatings) in accordance with the relevant product data sheet, specifications, drawings, and manufacturer recommendations.

Electrical And Instrumentation:

Alarm Systems; Cables; Control Panels; Current/Voltage regulators; Motors; Motor Control Centers; Rectifiers; Switchgears; Transformers; UPS Systems; etc.

Vendor Expediting Department (VED):

Expediting is a concept in project management and purchasing that ensures the timely delivery of goods and components of high quality.

The procurement department or an external expert oversees the manufacturing process at the supplier with respect to quality, packaging, compliance with standards, and established deadlines. Consequently, the expeditor guarantees that the goods are delivered at the designated location in the agreed-upon quality on the designated date.

The expediting team at **AntiCorrosion Company** guarantees that the goods or products or items you have purchased are delivered on the scheduled date, in the agreed-upon quality, and at the agreed-upon location. **AntiCorrosion Company** employs a network of professional expeditors, both internal and external, who possess the necessary expertise.

The expediting team at **AntiCorrosion Company** assists you in the effective management of your project, including the timely delivery of the necessary items, conformity with standards, quality, quantity, and packing.

A distinctive inspection service that provides both field and desk expediting services.

Project Inspection Department (PID):

Project inspection involves inspecting items at site while constructing/manufacturing and receiving as manufactured and then installed & commissioning.

Project inspection includes the following items, but not limited to:

- Inspection of Incoming material
- Mechanical Equipment and Components
- Pressure gauge and Relief valve
- Pipe and Piping components
- Welding, Coating and NDT Inspection
- Electrical and Instrumentation Equipment's

Vendor Survey and Audit (VSA):

AntiCorrosion Company performs Supplier/Factory audits to determine whether the supplier has the capacity to produce and deliver the agreed-upon goods at the required quality (standards, norms), on time, and at the correct location.

AntiCorrosion Company assesses a company's existence, reputation, availability of quality documents, facility reliability, production capacities, ISO 9001 certificates, quality management systems, production control systems, employee work conditions, and environmental impact.

AntiCorrosion Company auditors visit factories and collect certificates and documents to determine if suppliers meet your production capacity and quality expectations. The supplier's quality system is evaluated to identify non-conformities and poor-quality products, allowing for timely resolution.

NDT Support Services (NSS):

AntiCorrosion Company provides critical NDT solutions as well as full-scope NDT services to contractors and businesses.

Nondestructive testing (NDT) is the process of examining, testing, or

Examining materials, components, or assemblies for discontinuities or differences in properties without jeopardizing the part's or system's serviceability. In other words, after the inspection or test is completed, the part can still be used.

Modern nondestructive tests are now used in manufacturing, fabrication, and in-service inspections to ensure product integrity and reliability, control manufacturing processes, reduce production costs, and maintain a consistent quality level. During construction, NDT is used to ensure the quality of materials and joining processes during the fabrication and erection phases, and in-service NDT inspections are used to ensure that the products in use maintain the integrity required for their usefulness and public safety.
